Recombinant Human MAP2K1 (Sf9)

Catalog Number	Size
AG315-10	10ug
AG315-25	25ug
AG315-B	Bulk

Specifications and Use

Description

Recombinant human mitogen-activated protein kinase kinase 1 (MAP2K1/ MEK1) produced in Sf9 cells is a single polypeptide chain with a 6His tag at the N-terminus. It contains 405 (12+393) amino acids, and having a predicted molecular mass of approximately 44.7kD, but migrates in SDS-PAGE with an apparent molecular mass of 50kD

Accession Number NM 002755

Source Baculovirus

Molecular Mass ~45kDa

Purity ≥90%, as determined by SDS-PAGE

Biological Activity

In addition to being a member of the dual specificity protein kinase family, MAP2K1 also acts

as an integration point for multiple biochemical signals in signal tansduction pathway. Recombinant human MAP2K1 (or MEK1) protein is ideal for the studies of protein

phosphorylation and other related function assays.

Formulation 20mM Tris-Cl (pH7.9), 20% Glycerol, 100mM NaCl, 1mM DTT and 0.5mM EDTA

Storage The protein sample can be stored under sterile conditions at 2- 8 oC for one

month or at -70oC for three months without detectable loss of activity. Avoid

repeated freeze-thaw cycles

Special Notes FOR RESEARCH ONLY
